

Sparkrun benchmark TPS by prompt size

Sparkrun benchmark aggregate TPS by concurrency (1024-token prompts)

The chart displays the relationship between the number of prompt tokens and a specific metric for various models. The x-axis, labeled 'Prompt tokens', includes categories: 256B, 1K, 4K, 8K, 16K, 32K, 64K, 127K, and 254K. The y-axis ranges from 0 to 350. The chart features numerous lines, each representing a different model. Most models show a sharp increase in the metric as the number of prompt tokens increases, particularly after the 16K mark. Some models, like the one represented by a dark blue line, show a significant drop in the metric between 256B and 1K tokens before rising again. The orange line shows the most dramatic increase, reaching a value of approximately 340 at 254K tokens.
